

**PERMISSION TO DISTRIBUTE DATA
THROUGH PSYCHOSIS BANK
Carnegie Mellon University**

Carnegie Mellon University is participating in a data-sharing program known as PsychosisBank that is an extension of TalkBank, established through federal and foundation grants to Brian MacWhinney at Carnegie Mellon. This PsychosisBank is set up in collaboration with a consortium of researchers, called Discourse in Psychosis. For the program to function properly, contributors will be asked to and will give permission for their work to be made available to other researchers. With a full understanding of the aforementioned, I hereby give permission to PsychosisBank to make and circulate electronic copies of the language transcripts and media that I describe below. These copies may be distributed to scholars and other responsible parties. I warrant that this use of the data is in accord with Human Subjects review procedures at my institution and that participants have given informed consent to have their data available to researchers. I also warrant that there is no copyright restriction over the transcripts and media being circulated. Any further restrictions that I wish to place on the use of these data are listed under (2) below. I do not hold Discourse consortium, Brian MacWhinney or Carnegie Mellon responsible for the enforcement of these further restrictions and indemnify and render harmless the Discourse consortia, Brian MacWhinney and Carnegie Mellon University against any actions at law or in equity or in similar courts of any jurisdictions arising from violations of these restrictions.

1. General description of the data set, and IRB Approval # (if available):

The shared data is part of the Biopsychosocial Risk and Resilience Study (Ethics Approval Number ERN_22-0200; Ethics Committee, University of Birmingham, UK). Data has been collected in young healthy adults (healthy controls aged 18-35 years) and includes audio recordings from 1) five participants referring to sections 1, 2 and 3 of the DISCOIRSE protocol), and 2) 31 participants referring to sections 4, 5 and 6 of the protocol.

Demographic and environmental data can also be shared, including SIPS data (i.e, subclinical levels of psychotic experiences).

2. Restrictions to be placed on the use of the data:

Not applicable as ethical approval for Data Sharing is in place.
